Components with API Data Fetching and Dynamic Routing

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows the project structure, including the `src` directory and the `pages` directory. The `pages` directory is expanded, showing the `api` directory. The `api` directory is expanded, showing the `proxy.js` file. The `proxy.js` file is open in the editor, showing the following code:

```
1 import { createProxyMiddleware } from 'http-proxy-middleware';
2
3 export const config = {
4   api: {
5     bodyParser: false, // Disable bodyParser for proxy to work
6   },
7 };
8
9 export default createProxyMiddleware({
10   target: 'https://template1-neon-nu.vercel.app',
11   changeOrigin: true,
12   pathRewrite: {
13     '^/api/proxy': '/api/products', // Rewrite /api/proxy to /api/products
14   },
15 });
```

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows the project structure, including the `src` directory and the `app` directory. The `app` directory is expanded, showing the `components` directory. The `components` directory is expanded, showing the `HomePage` directory. The `HomePage` directory is expanded, showing the `NewArrivals.tsx` file. The `NewArrivals.tsx` file is open in the editor, showing the following code:

```
1 'use client'; // Ensure client-side rendering
2
3 import React, { useEffect, useState } from 'react';
4 import Image from 'next/image';
5 import Link from 'next/link';
6
7 // Define the Product interface
8 interface Product {
9   category: string;
10   sizes: string[];
11   _id: string;
12   description: string;
13   imageUrl: string;
14   discountPercent: number;
15   isNew: boolean;
16   colors: string[];
17   name: string;
18   price: number;
19 }
20
21 const NewArrivals: React.FC = () => {
22   const [products, setProducts] = useState<Product[]>([]);
23
24   useEffect(() => {
25     // Fetch data from API
26     async function importProducts() {
27       try {
28         const response = await fetch('/api/proxy'); // Ensure this proxy is configured
29         if (!response.ok) {
30           throw new Error('HTTP error! Status: ${response.status}');
```
